

Worksheet – Merge Sort

You are using the Merge Sort algorithm on the following array:

- 1) Label each of the arrows with a number (1-21) to indicate the order in which they happen. Merge arrows happen two at a time.
- 2) In regards to the array size, when do we split the array?

Name _____

Period _____

3) What must be true of the two arrays involved when we merge them back together?

4) Show how two arrays of size 1 are merged back together in order:

$4 > 3$, so 3 is merged in

5) Show each number being added one at a time (the first is given):

| | | | |
|----------|----------|-----------|-----------|
| 3 | 4 | 11 | 24 |
|----------|----------|-----------|-----------|

| | | | |
|----------|----------|-----------|-----------|
| 0 | 9 | 18 | 23 |
|----------|----------|-----------|-----------|

$0 \leq 3$, so 0 is merged in

Include the reason each number is added to the left of the array (the first is given). Note that the grey spots are not yet filled.
